

DPF & ENGINE MAINTENANCE PERSONALIZED TRAINING

TRAINING FOR YOUR TECHNICIANS AND OPERATORS

On-Site Training Options

For a more personalized approach, Ironman brings our training coaches to you! This allows for hands-on experience and gives your operators and technicians the opportunity to train with your specific equipment and retrofit devices.

Your technicians will learn the functionality of retrofit devices, proper maintenance techniques and what to do if the LED monitor lights turn on. Also, live demonstrations will be available pertaining to the LED monitor lights, retrofit diagnostic software, downloading and reading data records and ultimately troubleshooting problem faults.

We offer two types of on-site training:

- **Level 2 - DPF 101 Class**

Basic maintenance training for the driver / operator
(Approximate duration: 1 hr)

- **Level 3 - DPF Advanced Class**

Maint. & troubleshooting training for the mechanic / technician
(Approximate duration: 2 hrs)

TOPICS

- **DPF 101: Introduction to a diesel particulate filter and its components.**
- **Active and passive devices.**
- **Regeneration vs. substrate cleaning.**
- **Retrofit and engine compatibility requirements.**
- **Proper DPF and engine maintenance requirements.**
- **Durathon service and substrate cleaning requirements.**
- **DPF warning light instructions.**
- **Troubleshooting & software diagnostics training.**
(DPF advanced class only)
